#### **DETAILED ACTION**

#### Response to Arguments

After a careful review of applicant's arguments dated 10/06/09 with respect to the claims have been considered but are most in view of the new ground(s) of rejection.

Applicant alleges on pages 2-3 of the remarks, that Fuchs et al. does not teach or suggest the step of an "online source reconstruction system for *continuously* acquiring electromagnetic signals". In other words, that there is no discussion in Fuchs et al. of *continuously* acquiring signals (emphasis added).

Continuous, is a modification that is within the skill of the art.

In re Dilnot, 319 F.2d 188, 138 USPQ 248 (CCPA 1963).

### Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 20 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The limitation "with said circuit including a computer system, with a processor and a memory" is considered to be new matter.

Application/Control Number: 10/765,320 Page 3

Art Unit: 3737

### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 16-17 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by non-patent literature Fuchs M. et al. "Improving source reconstructions by combining bioelectric and biomagnetic data".

Fuchs M. et al., teach a method of evaluation comprising: acquiring an electromagnetic physiological EEG/MEG signal with a sensor on a subject (see abstract); performing a source reconstruction of the electromagnetic physiological signal via a signal processing circuit in communication with said sensor (see introduction), with said circuit including a computer system, with a processor and a memory (see BEM model setup section), the computer system (see workstation and fig. 10 as an example), being configured to support multiple parallel threads of execution with one thread being a measurement module (SEP/SEF; see Evoked somatosensory field examinations section; see simulations) and a second thread being a source reconstruction module (BME model); feeding source reconstruction data through a feedback loop to the measurement module to modify the analysis of a new electromagnetic physiological signal (see introduction and methods section; SEP/SEF measurement verification); and displaying source reconstruction results overlayed onto anatomical data of said patient (see abstract and figs. 10-13).

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 18-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fuchs M. et al. "Improving source reconstructions by combining bioelectric and biomagnetic data".

Fuchs M. et al. substantially discloses all the subject matter as applied to claim 20 above. However, Fuchs M. et al. does not explicitly disclose that the sensors acquire ECG or MCG signals. Fuchs M. et al. disclose the use of electrophysiological signals such as EEG and MEG. Therefore, it would have been obvious to a person skilled in the art at the time the invention was made to use ECG and MCG signals in order to enhance the capabilities of the method to analyze cardiac physiological parameters.

#### Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Application/Control Number: 10/765,320 Page 5

Art Unit: 3737

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to JOHN F. RAMIREZ whose telephone number is (571)272-8685. The examiner can normally be reached on (Mon-Fri) 7:00 - 3:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Brian L. Casler can be reached on (571) 272-4956. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
